Report on one-on-one meeting #1

It is clear that you have spend substantive time with the material and come to a good understanding of it. You were able to quickly answer many of my questions, and with minor prompting were able to answer nearly all of them clearly. This was great to see. More time and effort would, as always, improve your understand and ability to explain mechanisms/analyses/etc, but for the most part you simply need to keep up the good work.

Report on one-on-one meeting #2

This was another solid performance. You were able to quickly identify what I was asking and address my questions, confidently referencing your notes when it would help. You efficiently covered separation, matching, three-dimensional boundary layers, and compressible boundary layers. You were a little tripped up on one of the compressible boundary layer questions, but that is nothing to be concerned about. You mostly need to just keep up the good work for the rest of the course.
